[The Next Phase](#)

Archives Unleashed

This past summer, the Archives Unleashed Project [announced](#) we would be continuing our work in a second [Andrew W. Mellon Foundation](#) grant. Our original team of investigators will be joined by colleagues from the Internet Archive to integrate and blend complementary services and tools to broaden

access to web archives.

As our team begins work, we wanted to share what our priorities will look like for this second phase!

You can read more in our recent Medium Post: [Ding, Ding, Round Two](#).

Integrating Archives Unleashed with the Internet Archive

Project Aim

Integrate analysis tools developed by Archives Unleashed with Archive-It services to:

1. Join complementary web archiving services in an end-to-end process;
2. Enhance usability and accessibility to web archive data;
3. Support collaborative opportunities to advance research using web archive data.

[#WebArchiveWednesday: A Community Conversation](#)

Thanks to the folks at the [International Internet Preservation Consortium](#) (IIPC), the community has an opportunity to contribute to regular Wednesday discussions using the [#WebArchiveWednesday](#) Twitter hashtag.

As a special way of celebrating a successful year of engagement, our project manager has put together a short analysis of community tweets.

#WebArchiveWednesday was originally used to promote @NLAPAndora, Australia's national web archiving program.

On 6 November 2019, IIPC reinvigorated the hashtag to encourage tweets about web archiving activities around the world. Let's take a look at how the hashtag has developed.

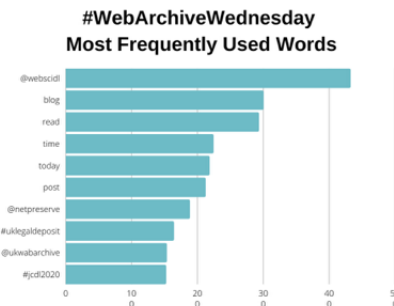

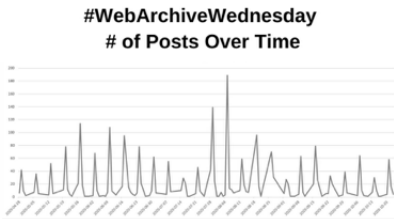

Diameter: 7
Density: 0.013250
Reciprocity: 0.124300
Centralization: 0.240500
Modularity: 0.357600

2543 Messages
485 Unique Posters
86% of messages are
retweets; this community
loves to share!

Tweets collected from April to October 2020 including the hashtag #WebArchiveWednesday via Netlytic

The Archives Unleashed Project: Technology, Process, and Community to Improve Scholarly Access to Web Archives

The main contribution articulated in this paper is a process model that decomposes scholarly inquiries into four main activities: filter, extract, aggregate, and visualize. Based on the insight that these activities can be disaggregated across time, space, and tools, it is possible to generate "derivative products", using our Archives Unleashed Toolkit, which serves as useful starting points for scholarly inquiry.

Scholars can download these products from the Archives Unleashed Cloud and manipulate them just like any other dataset, thus providing access to web archives without requiring any specialized knowledge. Over the past few years, our platform has processed over a thousand different collections from over two hundred users, totalling around 300 terabytes of web archives.

This was prepared and presented for the [Joint Conference on Digital Libraries in 2020](#).

Building Community at Distance: A Datathon During COVID-19

by Samantha Fritz, Ian Milligan, Nick Ruest, and Jimmy Lin.

This article reflects on the challenges and opportunities that underlie the transition of in-person events to online ones in the wake of COVID-19. The authors use their experience of running the [first virtual Archives Unleashed Datathon](#) to discuss the broader implications for transitioning events online. It gives both practical recommendations to event organizers as well as broader reflections on the role of digital libraries during the COVID-19 pandemic and beyond.

This article is part of a special issue of [Digital Library Perspectives](#) on "[Digital libraries and COVID-19: responding to a global emergency](#)".

Content-Based Exploration of Archival Images Using Neural Networks

by Tobi Adewoye, Xiao Han, Nick Ruest, Ian Milligan, Samantha Fritz, and Jimmy Lin

We present DAIRE (Deep Archival Image Retrieval Engine), an image exploration tool based on latent representations derived from neural networks, which allows scholars to "query" using an image of interest to rapidly find related images within a web archive. This work represents one part of our broader effort to move away from text-centric analyses of web archives and scholarly tools that are direct reflections of

methods for accessing the live web. This short piece describes the implementation of our system and a case study on a subset of the GeoCities web archive.

This piece was prepared and presented for the [Joint Conference on Digital Libraries in 2020](#).

We Could, but Should We? Ethical Considerations for Providing Access to GeoCities and Other Historical Digital Collections

by Jimmy Lin, Ian Milligan, Douglas Oard, Nick Ruest, and Katie Shilton.

This article provides an introspective and cross-disciplinary approach to the questions raised around technology ethics. The authors consider the implications and impact of analyzing digital collections, using a 4-Terabyte GeoCities web archive collection as a case study.

This paper was originally intended to be presented at [CHIIR 2020](#) in Vancouver (Conference on Human Information Interaction and Retrieval), however, the event was cancelled due to COVID-19.

This paper can be accessed through the [ACM Digital Library](#) and is also available as a [preprint](#).

Workshops + Presentations

Archive-It Partner Meeting

The 2020 Archive-It Virtual Partner Meeting was held on October 7, 2020, with over two dozen presentations, sessions and discussion groups.

Ian Milligan presented on the project's second phase which will see the integration

of the Archives Unleashed Cloud with Archive-It.

Special Congratulations

The Archives Unleashed Project would like to extend congratulations to Dr. [Sarah McTavish](#) who recently and successfully defended her dissertation “[The Queer Eternal September: LGBTQ Identity on the Early Internet and Web](#).” We are so grateful to have had Sarah as a collaborator on our project, she created several of our Cloud Learning guides and was an avid tester of the Toolkit and Cloud. We look forward to seeing where research opportunities will take Dr.McTavish next!

The Archives Unleashed Project aims to make petabytes of historical internet content accessible to scholars and others interested in researching the recent past. Supported by a grant from the Andrew W. Mellon Foundation, the project will develop web archive search and data analysis tools to enable scholars and librarians to access, share, and investigate recent history since the early days of the World Wide Web.
